

✓ Hedge Funds

✓ Private Equity

✓ Asset Managers

Our global engineers manage cloud and server infrastructure across Azure, AWS, hybrid environments, and our own private cloud. Whether it's a Data Warehouse solution in Azure, an elastic development environment in AWS, or a private cloud hosted Order Management System, we design, build, and operate secure environments that let you focus on the business while we take care of the technology.

Cloud & Server

Our services include patching, monitoring, cloud networking, disaster recovery, backup and retention, and multi-region failover. Identity integration and access controls are built in from the start, and every environment we deploy is monitored 24x7 and backed by a support team that understands the criticality of uptime and security in financial services.

Customer Profile

Use Case

Private Markets

Capital Markets

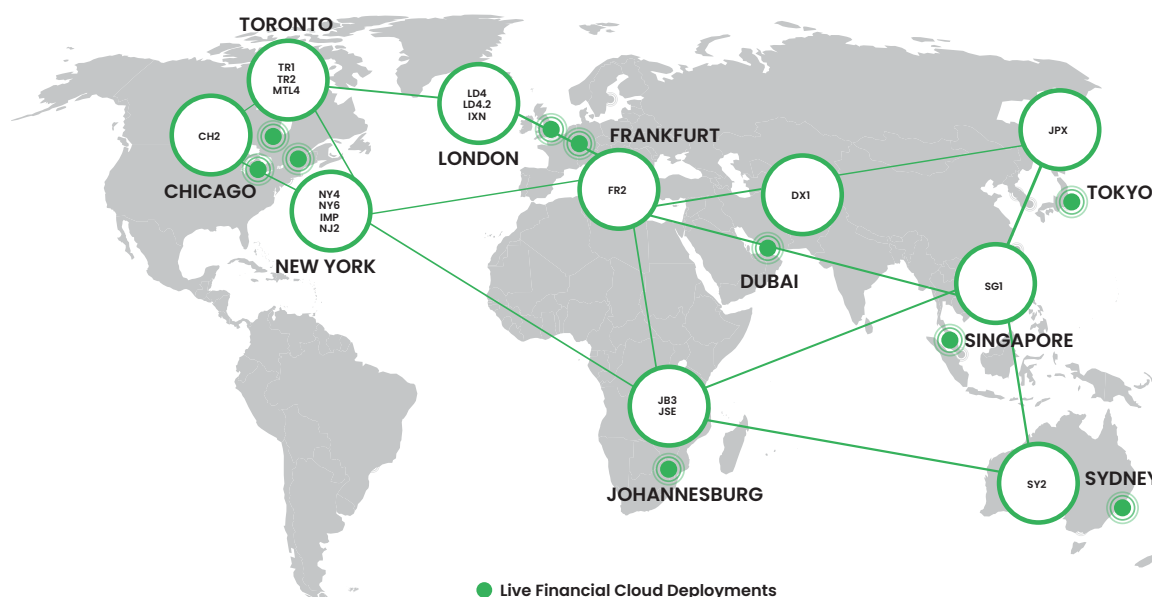

Options automates secure device provisioning with Intune and AutoPilot. For a European Private Credit fund, we rolled out Intune-managed laptops with custom AutoPilot builds and MDM policies, cutting onboarding time by 75%.

Options provides a number of virtual desktop solutions to meet our customers' needs. For a Global Hedge Fund we implemented a virtual desktop strategy using Azure Virtual Desktops, enabling their travel-heavy team to work seamlessly on the move.
