

## Next-Generation Desktop Performance Engineered for Mission-Critical Workloads

Transform your trading floor and back office operations with our GPU accelerated Hosted Desktop Infrastructure (HDI) solution. Purpose-built for hedge funds, investment banks, and quantitative trading firms, this solution delivers physical workstation performance from anywhere, without compromising on security, speed and user experience.

### Solution Overview

Powered by high-density blade infrastructure with dedicated GPUs, our HDI Solution eliminates the performance bottlenecks of traditional virtualization while maintaining the resilience and security benefits of centralized compute. Every user receives a dedicated 16-core processor, local NVME, and NVIDIA GPU, ensuring they have the exact performance needed for Bloomberg Terminal, complex Excel macros, quantitative analysis, and multi-4K monitor workflows.

#### Performance

- Ultra enhanced display capabilities supporting multi-monitor 4K graphics.
- Full app compatibility to run multiple trading systems simultaneously: Bloomberg, MATLAB, dev tools, and GPU analytics.
- Dedicated GPUs for consistently fast and responsive virtualization and streaming.

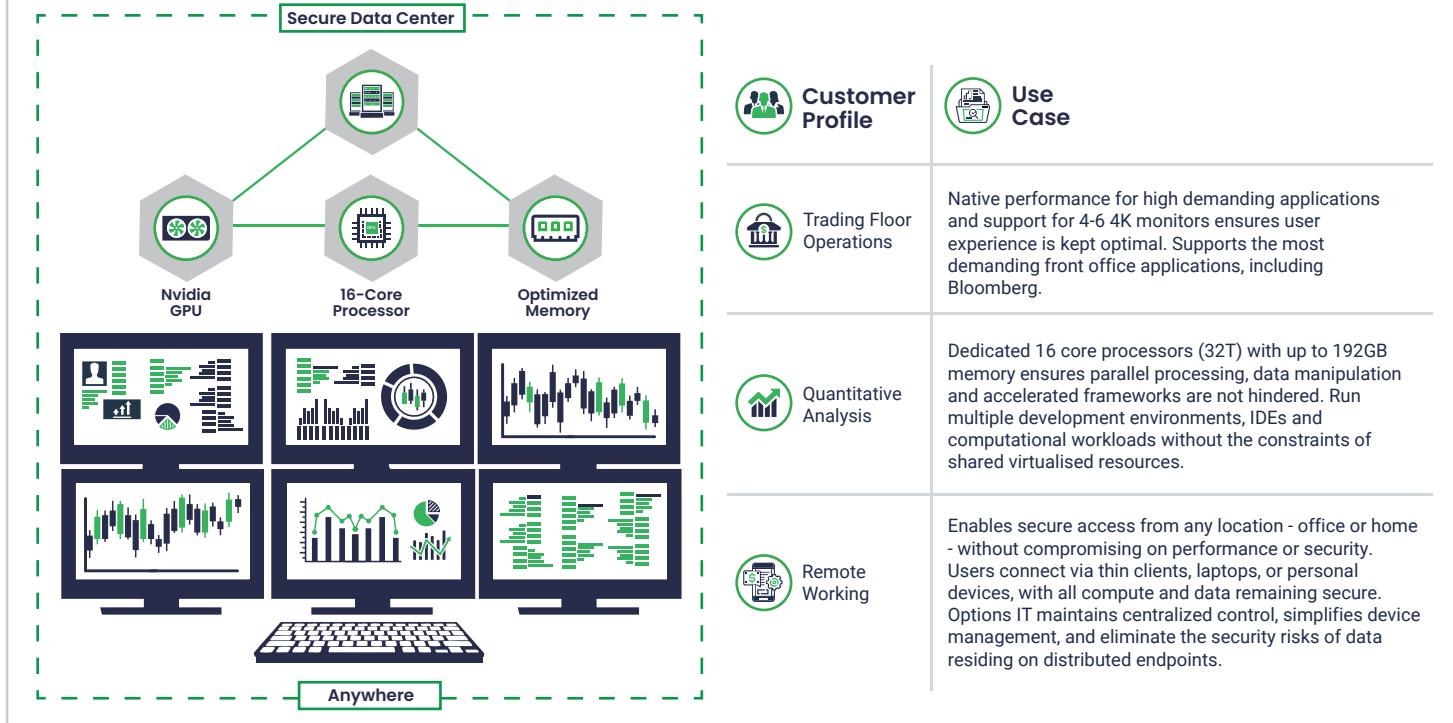

#### Security

- Compute resources securely hosted in OTL global data centers with physical safeguards.
- Centralized logs track activity for quick threat detection.
- Automated compliance monitoring supports regulatory adherence.

#### Resilience

- Work from anywhere with full desktop access.
- Tailored hardware for every team and 24/7 global support.
- Multiple delivery options via Horizon and Citrix, with flexible configuration methods like Intune and Puppet.
